

## **Publishers' Announcements.**

**THE ADVERTISING DEPARTMENT WILL BE CONDUCTED SOLELY ON ETHICAL PRINCIPLES. IT IS EXPECTED THAT OUR READERS WILL AID THE JOURNAL BY SHOWING OUR ADVERTISERS THE COURTESY OF AT LEAST NOTICING THEIR VARIOUS ANNOUNCEMENTS OR IN MORE ACTIVELY INTERESTING THEMSELVES IN THE ADVERTISERS' BEHALF.**

### TO OUR READERS.

The success of our journal largely depends on the practical aid furnished by our friends who have given us a share of their advertising patronage. You should not lose a single opportunity to show them practical appreciation for their efficient and generous support—a kindly word, an attentive ear, a willingness to test the merits of their claims, and a hearty indorsement of their trying to be in accord with our work. We have the best advertising of any special or high class medical journal. It enables us to give the profession the very best journal in its special field.

We owe our friends some active allegiance and we earnestly ask that no opportunity be missed to aid them in return. A word to the wise is sufficient. We certainly need use no further argument. Examine our patrons' departments carefully.

**THE JOURNAL CONTAINS THE BEST DIRECTORY OF PRIVATE INSTITUTIONS PUBLISHED.**

### THERAPEUTICS OF PEPTO-MANGAN "GUDE"

Dr. Ludwig Pohe (Aerztlich. Cent. Auz. Vienna, 9, 20, 99) thinks that ferruginous preparations in neurasthenia and hysteria have received too little consideration, and summarizes the reasons to improve the quality of the blood, and emphasizes that to do this successfully "Gude" pepto mangan must be used. He considers that it stimulates the hemato-poietic organs to increased activity more satisfactorily than any other preparation of iron.

### MAGEE'S EMULSION OF COD LIVER OIL.

What do you know about it? The company have taken space with us and we have promised that our readers would take hold and investigate their claims for a superior emulsion and effective combination, and that if the preparation should prove worthy, we would do our very best to say so. The testimonials of Drs. Waters, Ground, Surgeon General Read, Grinnell and Larrabee are not to be ignored. We trust one and all will give this preparation a thorough test.

### SOME ATTRIBUTES FOR CONSIDERATION.

It restores digestive functions. It takes hold of the dormant, torpid condition and stimulates to a normal activity. This assures proper assimilation and reconstruction of wasted tissue. It does this by invigorating and energizing nerve force. That is why Gray's Glycerine Tonic Comp. does its work, and is justly called a nerve tonic par excellence. When you use creosote or guaiacol you will find it an excellent vehicle, and you will be enabled to give larger doses and obtain quick and most satisfactory results with the minimum of local irritating properties.

### THE POST PEN.

This pen never sells for less than three dollars. We are enabled to put all our subscribers this year in the way of obtaining a most excellent article. It is a novel device and a perfect pen. We can let them go for one dollar and a quarter with the JOURNAL, making \$4.25 for both JOURNAL and pen. Designate the quality of pen as soft, hard, blunt, or stub point. See page xxviii.

### PHYSICIAN'S VISITING LISTS.

He who desires a new one for 1900 should see P. Blakiston's Son & Co.'s announcement before finally selecting one.

## INDIGESTION.

As long as people will be unwise in matters of diet, just so long will physicians be called upon to treat all forms of indigestion. It, therefore, is well to consider a remedy which is suitably adapted to this condition. We desire to call attention to Ingluvin for treatment of all forms of dyspepsia. It is a bland preparation of the ventriculus callosus gallinaceous. It has a property of soothing the irritated gastric mucous membranes and reestablishing a normal secretion of the digestive fluids. It has time and again proven itself superior to pepsin. Its prescription is attended with more certain results than pepsin. Whenever pepsin is indicated try Ingluvin. It will give you more satisfaction. Messrs. Wm. R. Warner & Co., Philadelphia, the manufacturers, will send you sample upon request.

## CREOSOTE IN INDIGESTION.

E. LAMBERT YOUREX, M.D, BALTIMORE:

I wish to speak of "Maltine cum Creosote," having taken it myself for indigestion which attacked me some time ago, and seemingly became persistent in spite of treatment.

I was somewhat "run down" as to general health, and I believe the attack was much due to this circumstance. Digestion was slow and imperfect, especially of the starches. The stomach seemed to be in an atonic condition.

Knowing creosote to be indicated in such atonic condition, and remembering I had a sample of "Maltine cum Creosote," I decided to take it, which I did in small doses of a dram after meals. It began to do good work immediately, and after taking the bottle I find myself almost cured.

I am, therefore, pleased to state I have found a new indication for a combination which I consider one of the most valuable of the Maltine Preparations.

## DIET IN CHRONIC INTESTINAL CATARRH.

An exclusive milk diet should have a trial in every case. Skimmed milk can be taken in larger quantities and with less repulsion, and is therefore to be preferred. The exclusive milk diet can be varied with buttermilk, koumiss, or wine-whey; and fruit-juices, as orange-juice, lime-juice, or tamarind-water, please the patient without doing harm. In the case of adults as well as children the milk is made more digestible by diluting it with barley- or rice-water, or by adding transformed farinaceous food to milk in the form of Mellin's Food, and other foods of this class.

From "System of Medicine," by William Pepper, M.D., LL.D.

## FAMILIAR CLINICAL PICTURES.

Among the most prevalent cases that physicians are called upon to treat at this season of the year are Pneumonia, Typhoid Fever and La Grippe.

There are in each instance well-defined characteristic symptoms of organic disease resulting in disturbances of practically all the functions of the body. In consequence of this morbid process the vital force becomes diminished through the excessive febrile condition, thus checking Nature's normal work. With advance in knowledge in the use of antipyretics, clinical observation based on practical experience at the bedside reveals the fact that practitioners invariably obtain the most gratifying results from the use of Liquid Antipyretic (Tilden's) in the febrile conditions of the above-named diseases; particularly is this applicable in stubborn complications accompanying La Grippe. Liquid Antipyretic (Tilden's) antagonizes both febrile and cardiac depression by building up the natural functions of the body, giving Nature the needed opportunity of resuming its normal work, for in so doing it is regarded as one of the most valuable antipyretics at the profession's command.
